

VENTO SPI

_Refrigerated shelves. Semi plug-in

Flexible connections for optimum presentation

VENTO SPI are specially designed for use in brine-cooled systems and impress with maximum display area and immense flexibility in design. The VENTO product family can be flexibly expanded and adapted to the conditions in the store.

VISUAL MERCHANDISING

VENTO SPI are a completely flexible and connectable family of refrigerated shelves designed for high product loads. With a wide range of glass door designs and the available low front versions (220 mm), the VENTO SPI are ideally suited for optimum product presentation.

LOW COSTS

The low investment outlay and operating costs speak for themselves. In addition, the VENTO SPI scores with minimum maintenance costs. The integrated and energy-efficient LED head lighting and optional shelf lighting ensure optimum presentation of your goods.

FLEXIBLE SYSTEM

The industrially manufactured refrigeration circuits of the VENTO SPI offer the lowest risk of leakage.

COMPATIBLE WITH THE ACTIVE MONITORING SYSTEM

Our Active Monitoring System (AMS) allows us to detect problems before you notice them. As an essential add-on to all AHT products, the AMS makes it much easier for you to manage and monitor the AHT cooling systems in your stores. Our products are also compatible with other systems.

ENVIRONMENT AND CLIMATE

VENTO SPI operate with a hermetically sealed cooling system and use the ecologically harmless and natural refrigerant propane (R290). This makes them particularly environmentally friendly.

INDIVIDUAL BRANDING

VENTO refrigerated cabinets can be individually adapted to the store design. A wide range of colours allows the best possible integration.

TEMPERATURE RANGES

H1 – Chilled vegetables & fruit	+1°C to +10°C
M2 – Dairy products	-1°C to +7°C
M1 – Dairy products, colder	-1°C to +5°C
M0* – Dairy products, special temp.	-1°C to +4°C
S1* – Meat & fish	-1°C to +2°C

* with GD models only

USPs

FLEXIBLE SYSTEM

VENTO scores with quick installation thanks to simple multiplex connection and the possibility of easy repositioning and system expansion even in existing stores. Piping and a flow control valve for the refrigerated cabinet are already included in the scope of delivery.

HEAT RECOVERY

The waste heat produced by the refrigerated shelves can be utilised for heating the warehouse or other areas of the store. Thanks to the piping supplied on the refrigerated shelves, the waste heat can be conducted to an external pump station and re cooler. That eliminates the need for a separate machine room.

Versions

VENTO SPI GD

VENTO SPI is also available with hinged doors made of glass or plastic. Sliding glass doors are also available. These add-ons make the VENTO more energy efficient, cutting your energy costs.

A large selection of glass door versions for individual design can be found in the accessories catalogue.

VENTO SPI GD ECO

One of the most energy-efficient glass door refrigerated cabinets on the market. VENTO GD ECO operates with just one compressor and thanks to optimised seals is one of the most energy-efficient glass-door refrigerated cabinets on the market – perfect when aiming to minimise your CO₂ footprint.

VENTO SPI GD ROLL-IN

Filling has never been so easy. Floor-length glass or plastic doors allow the VENTO to be filled directly with roll-in trolleys.

VENTO SPI

The semi plug-in multi-deck units are designed for use in brine-cooled systems. A wide range of versions guarantees the best possible integration into your store.

CONFIGURATIONS

Stand-alone

In-line

Block
